ATTENTION! FARMERS AND GARDENERS

You are in the war—standing shoulder to shoulder with the fighting men at the front and on the seas. **You** are asked by the Commander-in-Chief to lead the big offensive on the Food Production Front.

In America the food shortage is just beginning to be felt, but in other countries people are starving. We must send even larger quantities of food to our Armed Forces, our Allies and to liberated peoples.

For sixty-one years we have been doing our utmost to produce the highest quality seeds. During the past year we have renewed our effort not only to produce the best seeds but also to produce enough seed.

This has not been easy, for there is a labor shortage on the farms and our Government is sending large lots of vegetable seeds to our Allied Nations, so that they can grow more of their own food.

Notwithstanding the effort to increase the supply of seeds, there will be a shortage of some varieties. We suggest that you order early.

Ceiling Prices have been established on Vegetable and Farm Seeds. Our policy has always been to sell the **BEST SEEDS** at the **LOWEST PRICES**. Our prices are therefore **BELOW CEILING** wherever possible.

Please Order Early,

Faithfully yours,

ALNEER BROTHERS.

FREE SEED

We give new varieties of Flower and Vegetable Seed with every order.

How to Order:

All seeds are shipped promptly. Plants and Tender Bulbs are booked and shipped in proper season; **we ship no plants during cold weather** on account of danger from freezing.

All seeds, bulbs, and plants are sent free by mail or express at prices quoted, to any part of the United States, unless otherwise specified. Seeds, etc., not prepaid are sent by express or freight at buyer's expense. State whether you want freight or express shipment made. If yours is a prepaid station, full transportation charges must be sent with the order.

The money must accompany the order, and can be sent safely by Postoffice Money Order, by Draft on New York or Chicago, by Registered Letter or by Express Company's Money Order. If you send your personal check, add 10 cts. to cover cost of banking exchange. Small amounts may be sent in postage stamps.

Illinois customers, please add 2% to your order to cover Illinois Sales Tax.

Please remember to write your **Name, Rural Route, Street Address, Postoffice, County and State** as distinctly as possible, especially the name, also the nearest Express Office.

Parcel Post Rates

Packages weighing 70 pounds can be sent to all zones. Ten pounds or more beyond the 5th zone usually go cheaper by express.

Zone	Distance up to	For First Pound	Each Pound Additional
1st & 2nd	150 miles	8c	1c
3rd	150-300 miles	9c	2c
4th	300-600 miles	10c	4c
5th	600-1,000 miles	11c	6c
6th	1,000-1,400 miles	12c	7c
7th	1,400-1,800 miles	14c	9c
8th	over 1,800 miles	15c	11c

In estimating parcel post charges be sure to make allowance for packing. A fraction of a pound takes full pound rate. Rockford is 90 miles west of Chicago.

EDIBLE SOY BEAN

BANSEI (90 days.) In recent years many varieties of edible Soy Beans have been imported from the Orient by the Department of Agriculture, and detailed study on their adaptation and also market and growing conditions have been made. As a result of these tests, several promising varieties have been obtained, and the one which seems the most suitable for the north is Bansei. Bansei has a plant that is erect and of medium height, very prolific, well adapted to a short growing season. The beans when ripe are glossy yellow, elliptical of mild and pleasing flavor. All Soy Beans of the edible variety are green when in the growing condition. They are highly resistant to disease and insect pests. Eating qualities are excellent when cooked to serve similar to Lima Beans. Roasted Soy Beans are very good and these are prepared by soaking the dried beans overnight, boil for one hour in salted water. Spread in shallow pan and roast in moderate oven, 350 degrees Fahrenheit, until brown. Sprinkle with salt while still warm. Pkt. 10c, $\frac{1}{2}$ lb. 25c, lb. 45c, 2 lbs. 85c, prepaid.

POLE
LIMA

BEETS

The soil best adapted for the beet is rich deep loam. Sow in drills 15 inches apart, one inch deep, and thin to six inches. For early, sow as soon as the ground can be worked in the spring; for main and autumn use, about the 5th of May. Sow the mangels in drills two feet apart and thin to 15 inches in the row.

Early Wonder

This wonderful result of years of reselecting and improving has now been so perfected that we believe it is one of the earliest and best turnip-shaped beets grown. It is much earlier than Crosby Egyptian. The tops are not quite as large as Crosby Egyptian, which permits close planting. The root is nearly globular in shape, slightly flattened. Pkt. 10c, oz. 20c, ¼ lb. 60c, ½ lb. \$1.10, lb. \$2.00.

Good for All

A new variety developed from Detroit Dark Red, which is equally good for table, canning or pickling. Reaches 3 in. when fully grown, but is best for canning when about 1½ in. in diameter. Roots smooth, globe-shaped, and very even in color, shape and size. Always deep crimson without any white zones. Tops short. Heavy yielder and early maturing. Pkt. 5c, oz. 15c, ¼ lb. 50c, ½ lb. 90c, lb. \$1.75.

Black Beauty

BEET

Black Beauty

In this variety we combine a very dark red color, round root, and earliness, which make it very desirable. It is indeed very early, maturing several days before the other sorts. The shape is uniformly perfect. In fact it is one of the smoothest beets on the market. The flesh is a rich dark blood-red color, tender, crisp, and deliciously sweet, besides having a small short top, also valuable for late sowing. Pkt. 10c, oz. 20c, ¼ lb. 60c, ½ lb. \$1.10, lb. \$2.00.

Crosby's Improved Egyptian

A very early, superior variety. Has few small tops and very small tap-root. Takes on its turnip shape in early stages of growth, making it much preferred for both first early crop and late sowing. Skin is dark red; flesh somewhat lighter. After boiling, it has a uniform bright red color and a delicious flavor. 45 days. Pkt. 5c, oz. 15c, ¼ lb. 50c, ½ lb. 90c, lb. \$1.75.

Extra Early Flat Egyptian

Grown extensively by market gardeners to supply the early market. Roots are distinctly flattened and have a small top; flesh is dark purplish red zoned with a trifle lighter color. It is tender and sweet. Fully grown roots measure 2½ in. in diameter. Pkt. 5c, oz. 15c, ¼ lb. 50c, ½ lb. 90c, lb. \$1.75.

Extra Early Blood Turnip

One of the best varieties grown for main crop. The roots are round, very smooth, of good marketable size, and for table use no variety can exceed it in fine quality. The skin is deep blood red; the flesh is also dark red and is sweet and tender. Pkt. 5c, oz. 15c, ¼ lb. 50c, ½ lb. 90c, lb. \$1.75.

Perfected Detroit

Matures in about 55 days. In this improved strain of Detroit Dark Red Turnip Beet the fine qualities which have made that variety standard for main crop sowing have been strengthened by careful breeding. It is earlier, and almost spherical in shape. Its small tops are just right for either dry or wet season, heavy or light soil. The color inside and out is a very dark red, and flesh of fine texture, tender and of excellent flavor. Pkt. 10c, oz. 22c, ¼ lb. 65c, ½ lb. \$1.20, lb. \$2.25.

I feel that it is my duty to let you know just what I think of your service and seeds. Last year I ordered seeds of you and was very well pleased with them. They all came up fine. Therefore I am letting all my friends know about your service and quality seeds.

TRUE GEORGIA COLLARDS.

The Peanut

The peanut is easily grown in every state. It requires but little care beyond that of thorough cultivation. A light soil is preferable. Plant about the same time as corn. Rootlets shoot into the ground from the vine, and peanuts are formed at the end under the surface. By mail, ¼ lb. 18c, ½ lb. 29c, 1 lb. 50c, 2 lbs. 90c, 5 lbs. \$2.00.

Celtuce

Celtuce belongs to the lettuce family but is entirely different in its growth and uses. The young leaves may be eaten as a salad, but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you must first remove all the outer skin and fibrous layers down to where they become light green and tender. As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots, with salt or mayonnaise.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor suggestive of celery, lettuce, asparagus, broccoli, zucchini and summer squash.

Celtuce is easy to grow. Plants grow quickly, forming a rosette of light green leaves which may be used, when young, as "greens." In less than 90 days after seed is sown, the central stem or stalk is usable and will be found most tender at this age. The stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Make first sowing of seed as soon as ground can be worked in the spring. Succession sowings at intervals of a week or ten days will give a continuous supply. Pkt. 15c, ½ oz. 65c, oz. \$1.25.

SWISS CHARD

SWISS CHARD

Swiss Chard, Giant

Swiss Chard or Silver

Beet Sometimes called Sea Kale Beets. Excellent for greens. This does not make edible roots like the regular garden beets, but is grown for the broad white leaf-stalks, which are bunched and cooked in the same manner as asparagus, and make a delicious summer vegetable. Pkt. 10c, oz. 20c, ¼ lb. 50c, ½ lb. 90c, lb. \$1.75.

CRESS or Peppergrass

Chinese Cabbage

One ounce of seed will sow 400 feet of row.
4 ounces per acre.

We advise that the seed be sown in July or August (not earlier) because Chinese Cabbage has a tendency to bolt to seed in warm weather. Sow where the plants are to remain in rows 2½ feet apart, 18 inches apart in the row. It is very easily grown and takes very little space. The crop matures in from 8 to 10 weeks.

Chihili This is the new grand strain of Chinese Cabbage. Grows 18 to 24 inches tall and 5 to 7 inches in diameter, with straight and narrow crown. Interior bleaches creamy white, crisp and delicious. New York Improved Spineless Egg Plant

CABBAGE

Yellows-Resistant

For early use, sow seeds in hot beds about the 1st of March; transplant as early as possible in the ground about 18 inches to 2 feet apart in very highly enriched soil. For late and winter use, sow seeds in open ground about May 1st to 15th. Plants are usually set in June or July, at a distance of 3 feet between rows and 2½ feet between the plants.

"Yellows-resistant" strains were introduced by the Wisconsin Agricultural Experimental Station so that Cabbages could be grown in localities where infected "Cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you have trouble growing cabbages owing to yellows disease in your locality, try seed of the resistant varieties described below.

Wis. Jersey Wakefield

Yellows-Resistant Early Jersey Wakefield An improved strain especially selected for "yellows-resistance." The heads are of conical form, with a broad base and pointed top. Compact plants and very productive. About the first of this group to mature. Pkt. 15c, oz. 50c, ¼ lb. \$1.75, ½ lb. \$3.40, lb. \$6.75.

Marion Market

Marion Market Yellows-resistant. This Cabbage resembles Copenhagen Market but matures a few days later and makes a much larger plant. Its most distinguishing feature is its complete resistance to Cabbage yellows and it is, therefore, valuable for land where "yellows-resistant" Cabbage is needed. The heads are almost round and very solid. It is a hardy, highly bred strain, grown exclusively for kraut and long-distance shipping. It has produced as much as 26 tons per acre. Pkt. 15c, oz. 50c, ¼ lb. \$1.80, ½ lb. \$3.50, lb. \$6.95.

Yellows-Resistant — Golden Acre (Wisconsin Detroit) New yellows-resistant" Golden Acre. Medium size, solid, round heads about 6 in. across; two weeks earlier than Marion Market. Plants are short-stemmed, of erect uniform growth, and have grayish green leaves. Pkt. 15c, oz. 50c, ¼ lb. \$1.75, ½ lb. \$3.40, lb. \$6.75.

Wis. Golden Acre

Wis. All Seasons

Wisconsin All Season's Disease Resistant

Wisconsin Ballhead. (Yellows-Resistant. (105 days.)

This new strain of Yellows-Resistant Cabbage was developed in answer to a demand for a late storage variety that would mature earlier and not as coarse as Wis. Hollander No. 8. After years of careful breeding this new strain was originated and in trials it has proven 100% resistant to Yellows, which is not true of No. 8. It is also more uniform and in fact more uniform than any of its type ever seen and is somewhat earlier than the No. 8. It was not bred from Wis. No. 8 but from an entirely new strain of cabbage. For market gardening, shipping and storage purposes it is second to none. Pkt. 15c, oz. 50c, ¼ lb. \$1.80, ½ lb. \$3.50, lb. \$6.95, postpaid.

Disease Resistant Wisconsin No. 8 Hollander

Disease Resistant Wisconsin No. 8 Hollander

A "yellows"-resistant strain of cabbage developed out of our stock of Hollander under the direction of Dr. L. R. Jones of the University of Wisconsin. At Racine, Wisconsin, where for several years many of the commercial crops of cabbage were badly infected or entirely destroyed by the disease called the yellows, this strain has proven to be practically immune from attack. Pkt. 15c, oz. 50c, ¼ lb. \$1.80, ½ lb. \$3.50, lb. \$6.95.

Sow as early in the spring as the ground can be prepared, in drills 15 inches apart; cover the seeds about one-half inch deep, and thin to from 3 to 5 inches in the row. In field culture when grown for horses and cattle, the rows should be two feet apart, so that the crop can be worked with horse and cultivator.

CELERY

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or Celery paper may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of row. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

Golden Cross Bantam

Wilt Resistant—High Yield—Uniform

We recommend this new hybrid sweet corn for places where Stewart's disease (wilt) makes it impossible to grow ordinary varieties of sweet corn. This corn which is the product of crossing two pure lines is not only resistant to bacterial wilt (Stewart's disease) but produces larger crops of beautiful ears. The ears have 10 to 14 rows of golden yellow kernels, uniform in length (about 8 in.) and of excellent quality. Matures a week later than Golden Bantam, the whole crop ripening at about the same time.

This crossed seed was produced by the controlled pollination of two inbred parents and will produce the true Golden Cross Bantam. Seed from the crop cannot be saved as it will break down. The cross has to be made each year. Pkt. 15c, ½ lb. 35c, lb. 60c, 2 lbs. \$1.00, 5 lbs. \$2.35, postpaid.

Golden Cross Bantam

Saxa This is a European variety which has become very popular in the United States. It is one of the very earliest radishes and quite slow to run to seed. The tops are very small, the radishes are round and bright scarlet. We recommend it for first planting in the garden, and also for forcing in hotbed and greenhouse. Cooper's Sparkler This type of Radish, having red skin with a white tip, has long been a great favorite, and with this variety the white portion extends much farther up than is the case with ordinary Scarlet Turnip White Tip Radish. The upper portion is a rich, brilliant red, showing in great contrast to the lower portion, which is a pure white, and adding greatly to its attractive appearance. The general contour is turnip-shape, and size medium, very uniform, with flesh crisp, tender and sparkling. The rapidity of its growth recommends "New Sparkler" for growing in the greenhouse, but it is equally as valuable for sowing in the vegetable garden. Pkt. 5c, oz. 15c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

It forms small top and will stand a great amount of heat without becoming pithy; is equally as good for early outdoor planting. Pkt. 5c, oz. 15c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

Pkt. 5c, oz. 15c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

TOMATO

Tomatoes do best in warm, moderately rich soil. Sow seeds early in March in hot bed or house, in shallow boxes. About May 15 to 20 in this latitude the plants should be set out in the open ground, in rows four feet apart each way. All seeds we offer are from critically selected specimens of fruit and must prove of the greatest value to the planter.

Firesteel

Firesteel 60 days. A small vine, large fruited tomato that is early, smooth, red through, of semi-acid flavor. Earlier than Earliana, less subject to cracking, with bush about 18 inches in diameter, but having sufficient foliage to prevent scalding of the fruit. For short, dry seasons and general adverse weather conditions, there is nothing that we have had that will equal it. It produces fruit when most others fail and can be relied on to set fruit when other types are dropping their blossoms. Pkt. 15c, ½ oz. 50c, oz. 85c, ¼ lb. \$2.50, ½ lb. \$4.25, 1 lb. \$8.00.

Rutgers A second early variety developed at the New Jersey Agricultural Experiment Station and introduced in 1935. A cross of Marglobe and J. T. D., desirable for market gardeners, for canning regular pack and for juice. Plant large with thick stems and vigorous foliage. Fruits similar to Marglobe but flatter at stem end; bright red, smooth with thick walls and small seed cells; ripen from center; flesh red and firm and low acidity. Pkt. 10c, oz. 30c, ¼ lb. 90c, ½ lb. \$1.60, lb. \$3.00.

Valiant This tomato has the rare combination of fine points sought by breeders for years—extra early fruit, borne in great abundance, but so smooth, firm, solid and fine colored that it compares well with many later varieties in this respect. This variety ripens large clusters of fruit when the other extra early kinds have only one or two ripe fruits. The fruits are good size (average over 4 ½ oz.) bright red all over, smooth and handsome and with no green spots. They are firm and solid and of excellent quality. Pkt. 15c, ½ oz. 50c, oz. 85c, ¼ lb. \$2.50, ½ lb. \$4.25, 1 lb. \$8.00.

Victor

Victor 68 days. This new tomato which was bred by Dr. Yaeger at Michigan State College has the rare combination of fine points, extra early fruit, borne in great abundance, but so smooth, firm, solid and fine colored that it compares with the best later varieties in this respect. This variety ripens large clusters of fruit when the other extra early kinds have only one or two ripe fruits. The fruits are good size (average over 4 ½ oz.) light green when young, changing to a bright red all over, smooth and handsome and with no green spots. They are firm and solid and of excellent quality. Pkt. 15c, oz. 60c, ¼ lb. \$2.00, ½ lb. \$3.50, lb. \$6.75.

John Baer A remarkable new variety of the extra early red or scarlet type. Not as early as Earliana, yet there are only a few days difference, and John Baer yields a much heavier crop of larger, more uniform and more attractive fruits that in total it makes a much more profitable crop to grow than any other extra early variety. Pkt. 10c, oz. 40c; ¼ lb. \$1.10, ½ lb. \$2.10, lb. \$3.95.

Pritchard or Scarlet Topper

As a result of the extensive experiments conducted by the U. S. Dept. of Agriculture in their quest for a perfect disease, wilt and rust resisting tomato, several fine varieties have been developed; but, it is believed that this, their newest introduction is the most perfect sort yet produced. An extra-early, large, smooth, and extremely solid Tomato of an intense scarlet color. Most productive and very attractive. Of a solidity that is truly remarkable, with very small seed pockets and no core. Its productiveness, particularly on rich soil, is amazing, and individual plants will bear 70 to 80 fruits each. It will yield 15 tons and more per acre. Pkt. 10c, oz. 30c, ¼ lb. 90c, ½ lb. \$1.60, lb. \$3.00.

Marglobe Tomato

Aster growers have been troubled with pests of recent years. This family has been widely attacked by the Fusarium Wilt, which condition has been overcome in growing the Wilt Resistant Strains which, although grown in infected soil, proved immune from the disease. Aster Yellows is also an enemy. This has been found to be transferred to the plants by tiny insects called leaf hoppers. The only means to overcome this is to grow the plants under a cheese cloth cover.

Improved Giant Crego Wilt-Resistant Midseason. Large blooms, 4 to 5 in. across, with long, ribbon-like, gracefully curled and twisted petals, giving them a Chrysanthemum-like appearance. Flowers are carried on long strong stems which make them ideal for cutting. The plants flower for several weeks during midseason. 2 ft.

Delphinium—Hardy Larkspur

Delphiniums are among the most beautiful and most widely used perennials for garden display and cutting. The regal stateliness of their massive, colorful spikes is unequalled by any other flower. They are of easy culture, succeeding best in deep, rich, well-drained soil. Bloom in June, and if spikes are cut close to the ground after blooming, new flowering growth will be produced—usually three crops in one season. Blooms the first year if sown early.

Perennial Larkspur

Pacific Giants, Mixed Here is a remarkably new strain of Delphinium developed on the Pacific Coast. Flowers are extremely large and well formed, $2\frac{1}{2}$ to $3\frac{1}{4}$ inches in diameter, symmetrically spaced and well balanced on a thin woody stem, practically 100 per cent double. This strain, although probably being the largest strain of Delphinium so far introduced, is also practically mildew resistant. The seed we offer includes many shades of colors including dark blue, violet, lavender, light blue, and white. Pkt. 25c, 2 pkts. 40c, $\frac{1}{4}$ oz. \$3.25.

Blackmore & Langdon's Strain—The Standard English Strain Of all the English-grown Delphinium we have ever grown, Blackmore & Langdon's have consistently been the best. Their mixture contains many immense double deep blue and purple. Pkt. 25c.

Wrexham or Hollyhock Flowered A wonderful, large-flowered type justly referred to as Hollyhock Flowered, because the stately plants with their large single, semi-double and double blooms closely set together form beautiful, tapering, spire-like spikes not unlike those of Hollyhocks. Many colors. 6 ft. Pkt. 15c.

Gold Medal Hybrids The plants are of strong, vigorous habit. The large flowers, running in the lighter shades of blue, are closely set on spikes two feet long and over. Pkt. 10c, $\frac{1}{4}$ oz. 60c.
